

# ROCKS

## SEDIMENTARY ROCKS

- Often have layers
- May have fossils
- Can be 'friable' (pieces rub off)
- Will not have interlocking crystals

## IGNEOUS ROCKS

- Have interlocking crystals
- Will not have layers (usually)
- Will not have fossils
- Will be dense and hard (except for some volcanics)

## METAMORPHIC ROCKS

- Have interlocking crystals
- Can have layers (foliation)
- Can be very dense
- Can have deformed fossils
