

## Earth's Resources - Student Activity

The major resources on Earth **are water, air, living things, rocks (including minerals and fossil fuels), soil and energy from the Sun.**

List all the things that each resource can be used for, then number them in order of importance from 1 most important to 6 least important.

Resource	Uses	Importance
Water		
Air		
Living things		
Rocks		
Soil		
Energy from the Sun		

Share your findings with others in your group and decide which resource (if any) is the most important. As a group, prepare a short statement on your findings and share that with the class.

We find that \_\_\_\_\_ is the most important because \_\_\_\_\_
